6.4.2.	NOOB (New Orientation for Overtaking Basics) Team Orientation	24

1. Car Construction Rules

1.1. Car Theme

Each car should have a theme that's whacky and entertaining. The crazier the better! You score points for entertainment value as well as speed, so go all out and come up with something completely mad. Bodywork is highly recommended, but not mandatory.

1.2. Drivers

Each car shall be controlled only by one human driver seated in or on the car.

1.3. Car Egress

Each car shall be constructed such that an uninjured driver can exit the car unassisted in 5 seconds or less.

1.4. Car Chassis

Each car shall not be longer than 1500mm (62")

Each car shall not be wider than 900mm (36")

Each car, including the driver seated and dressed per the rules, shall not be taller than 1800mm (72")

The chassis may be either based on a donor vehicle of some kind, or it may be a scratch build.

1.5. Wheels and Tyres

With the exception of treaded tanks and walking/shuffling carts, Each car must have a minimum of three wheels that support the weight of the car. Any wheel driven by a motor shall not be allowed to swivel like a caster wheel. Exceptions considered upon a 1 month notice to the Sanctioning Body prior to event.

The minimum wheel track (wheel-to-wheel width) allowed is 300mm (12").

The minimum wheelbase (axle-to-axle length) allowed is 450mm (18").

Each wheel that supports the weight of the car must have a tyre mounted to it.

With the exception of treaded tanks and walking/shuffling carts, all forces to drive the car during the race must be transmitted through one or more tyres.

As long as wheels and tyres meet budget requirements, any type of tread pattern or lack of therefore is allowed.

Be aware that Hacky Racer events can be held on tarmac or on grass, so be prepared for either.

Hovercraft are allowed.

1.6. Steering

No car may be steered by remote control or by anyone besides the driver(s) onboard at any time.

1.7. Motor Propulsion

Each car shall be propelled by one or more electric motors. Each motor must have a maximum RMS input voltage not greater than 48V from the motor controller.

No other form of motive power besides an electric motor is allowed. That include no pedals (unless the vehicle is sufficiently slow that it will make no difference either way)

1.8. Battery

Each car shall have at least one battery with a nominal voltage less than or equal to 48V that supplies traction current to the controller and motor Each battery in the car shall be of one of the following chemistries:

- SLA: Sealed Lead-Acid
- AGM: Absorbed Glass Mat Lead-Acid
- Ni-Cd: Nickel-Cadmium
- Ni-MH: Nickel-Metal Hydride
- LiFePO4: Lithium Iron Phosphate
- LiPO/Li-Ion Lithium Polymer/Ion*

*WARNING: Teams running any lithium chemistry other than LiFePO4 (IE aircraft or EV type batteries) will need to demonstrate safe handling and charging procedures, and have batteries stored safely in a padded durable metal container on the vehicle. (EV batteries that are already in a metal enclosure do not require an additional containment). The sanctioning body must approve each car's

implementation of Lithium batteries. Do not be the “this is why we can’t have nice things” dude. Do not mess this up, cut corners, or be the amateurs who “think” they know how this works. This is dangerous, you’ve been warned. See Dunning-Kruger Effect if you believe you are perfectly competent without peer review.

Fire extinguishers will be available on site. Please make sure you are aware of their location, and inform the organisers if you believe there is any problems with your batteries.

Capacitor banks (100,000uF or more of parallel capacitance) are not considered batteries and are not allowed. No switched capacitor system whose purpose is to supplement the battery power or capture braking energy is permitted. Advanced power storage systems can be considered by the Sanctioning Body with prior notice. They also can be vetoed by other teams under safety premises.

1.9. Controller

Each car shall have a throttle-controlled motor controller to transfer power from the battery or batteries to the motor(s). Contactors and other forms of on-off control are banned, as they are liable to weld shut, and are a pain for everyone while trying to line up for the grid.

1.10. Transponder

Each car must have an approved transponder affixed to it for timing and scoring purposes. These will be supplied by the organisers at the event.

The transponder system is I-Laps compatible, such as

<https://www.dronebit.co.uk/ilaps-fpv-drone-transponder.html>

Transponders must face upward and have a clear line-of-sight. There will be a timing gate vehicles must pass underneath

1.12. Moxie Label

Each car shall have a label for the moxie board, and its size shall be 150mm (6”) across by 45mm (1.75”) high. DO NOT IGNORE THIS. It’s the only way the audience knows you exist. Vague labels that are not iconic or in alignment with your design will totally screw you over. If you are the red ferrari car, for example, your label could simply be a red label stating “Ferrari.” Simple is good. Flashy is better. Remember most people have no idea who you are. Clueless in-jokes will

not work, random number scribbled on paper will not work effectively. Do not half-ass this. Use full ass.

The label should contain the car or team name and the car number.

1.13. Required Safety Systems

The following features of your car are required for safety purposes, and the implementation costs of these systems do not count toward your £500 budget

1.13.1. Bumpers

Bumpers are required safety systems

Each car shall have bumper-like structures in the front and rear of the car.

Each bumper must cover at least 75% of the width of the car

Each bumper must cover at least 25mm (1") of height within the vertical space of 100-150mm (4-6") from the ground

Each bumper shall be sturdy enough to survive the kind of accidental impacts that are expected in racing, and should be covered in rubber, foam, or other impact-absorbing material, unless it is itself shock absorbant.

Each bumper shall not protect any wheels of the car from side contact. (to avoid people using them as bumper cars).

1.13.2. Driver Protection

The car must extend beyond the driver in every direction when viewed from directly above. This protection shall be sufficient to prevent direct contact between the driver and another car/barriers during an impact from any direction. This protection especially applies to feet, which may not dangle off the car. Occupants may not use the bumpers as a footrest. In the event of impact, drivers should not be the first point of contact with any outside intrusion of any other vehicle.

1.13.3. Brakes

Brakes are required safety systems.

Each car shall have mechanical brakes capable of stopping the car in full per Rule 4.1.1.2

Brakes that apply braking force directly to the tyre of a car are not allowed to be the only source of mechanical braking.

Brakes that apply braking force to the ground are not allowed.

1.13.4. Battery Retention

Battery Retention is a required safety system

Each battery must be secured so that it remains in its position relative to the rest of the car during normal operation and during a tip or rollover.

1.13.5. Kill Switch

The kill switch is a required safety system.

Each car must have a kill switch or removable link that stops all current flow from the battery or all batteries to the motor(s).

This kill switch must be visible and accessible from the outside of your car. The kill switch should be yellow and/or red in color so someone other than you can shut your kart off in an emergency.

The kill switch may not be your throttle.

The kill switch should not disable any safety systems.

1.13.6. Fuse

The fuse is a required safety system

Each car must have one regulation fuse in series with the battery or batteries such that all current coming from the battery or batteries passes through the fuse before reaching any traction motor or traction motor controller.

It is recommended that the Fuse be located as close to the battery or batteries as possible.

Each car may not have regulation fuses stored on the car or driver beyond the one required to be in the circuit. regulation fuses may not be actively cooled.

'Active Cooling' is defined as cooling where energy (electrical, chemical, gravitational, dark, nuclear, thermal, temporal, etc) is expended in order to obtain some reduction in the temperature or rate of temperature rise of the fuse element.

Should you blow a fuse on race day, the timing and scoring booth's fuse dispenser will be the only allowed source of replacement regulation fuses.

The regulation fuse that each car is required to run varies based on the car's nominal battery output voltage as follows, and must be unmodified from its purchase condition:

Each car which makes use of walking mechanisms instead of wheels for propulsion is allowed to use a fuse with a current limit higher than the standard regulation fuse for that car's battery voltage.

- 48v = 30A (10S - 12S Lipo)

- 36v = 40A (8S - 9S Lipo)
- 28.8v = 50A (7S Lipo)
- 24v = 60A Fuse (5S - 6S Lipo)
- 18v = 80A Fuse (4S Lipo)
- 12v = 125A Fuse (3S Lipo)

If your nominal voltage is between ratings, you must use whichever current limit is lesser.

1.13. Optional Safety Systems

The following features of your car are optional safety features. They are not required, but the implementation costs of these systems do not count toward your £500 budget

1.13.1. Lights

Lights are optional safety systems for daytime races

Front and rear lights are required safety systems for night-time races

1.13.2. Reverse

A reversing system is an optional safety system. It is strongly recommended that you implement a method to put your car into reverse operation without exiting the vehicle.

1.13.3. Horn

A horn (or similar noise-producing device) is an optional safety system for daytime races. A horn (or similar noise-producing device) is a required safety system for night-time races.

1.14. Budget

Each car has an allowable budget of £500.

This budget covers only items that are a part of the car as it sits on the grid of any race, and does not include the cost of spare parts or development costs (except where those development costs are also part of the price of car components as it sits on the grid)

Each component of the car must be totaled in the budget according to the components' Fair Market Value. Fair Market Value is the cost someone could reasonably expect to pay for that item in similar condition elsewhere without a relationship to the seller/donor. The FMV of a used part worth £100 new and £25

used, that you got for £10 because your buddy owns a shop is £25. The FMV of a used part worth £100 new and £25 used, that your hackerspace got for free is £25. The FMV of a part bought on ebay (etc) from a seller who is not giving you preferential treatment is whatever you got it for, since anybody could have bought that part.

Cars that use shuffling and/or walking mechanisms for movement will be given a 500% increase in budget.

1.14.1. Bill of Materials (BOM)

Each car is required to have a BOM submitted at the beginning of each race weekend that includes the costs of parts on the car which count toward the budget.

The minimum items to be included in the BOM are:

- Donor vehicle (if applicable)
- Motor(s)
- Motor Controller(s)
- Wheels
- Tyres
- Batteries
- Other drivetrain components
- Any items which increase your race performance

Full BOM submissions are highly encouraged

Race points may be awarded for exceptionally well-documented BOMs, subject to TBD determinations made by TBD judges at TBD times.

1.14.2. Excluded Items

The following items are excluded from the budget:

- Brakes
- Physical throttle components and linkage
- Machining/ labour costs
- Shipping costs, taxes, and custom fees for parts/hardware/materials

1.14.3. Partially Excluded Items

The following items are counted at a fraction of their fair market value

- Batteries installed in vehicle (counted at 50% their Original FMV for the most expensive configuration used)

1.14.4. Budget Enforcement and Penalties

In the event that a Hacky Racers official or a majority of teams believe a team has greatly exceeded the £500 limit, they will be deemed suspect and are at risk of a buyout. Hacky Racers officials comprising of our team-submitted volunteers and event organizers will determine if teams have exceeded the budget and hold all rights to purchase a team's car for £500. By entering into an event, a team consents that their car could potentially be bought out at the end of the event for £500. A team may redeem their car and re-enter in the next event if they agree to remove the suspected over-budget component(s).

If the panel of officials determine the car to infringe on certain rules or bend said rules to a position that is beyond "the spirit of the series," then a completely arbitrary, painful, and time consuming penalty will be administered. If we get enough referrals from other teams for "breaking budget" and our tech inspector agrees, the sanctioning body has complete freedom to severely limit the car's performance, administer embarrassing penalties, or outright strip points to satisfy the masses. This penalty will most likely be made up on the spot, will cost you considerable ire and outrage and lifting this penalty will require considerable bribery (i.e. donations to the series).

1.15. Car Decorations and Modifications

Teams are encouraged to decorate and modify their cars in imaginative ways as long as the decorations and/or modifications do not present a risk of danger or injury to other participants or spectators above and beyond the risks and dangers inherent to the sport.

Vehicular weaponry is banned.

The sanctioning body reserves the right to examine your car and prevent your car from competing if they feel it poses a danger to you, the other competitors, or the spectators.

1.16. Team Secrets

To avoid the issue of race-day disqualifications, please contact the race organiser in advance to inquire if your modifications are legal. Modifications that are "team secrets" will be kept in confidence and will not be shared with other teams.

2. Driver Rules

2.1. General Driver Rules

Drivers should be over 18 and possess a driver's license.

2.2. Helmets

Each driver shall wear an approved helmet whenever they are on track to race or to practice. Helmets shall be subject to inspection and approval by race officials.

An approved helmet shall be a $\frac{3}{4}$ or full-face motorcycle, motocross, or automotive racing helmet that meets or exceeds DOT, SNELL, or ECE standards.

Drivers who wear helmets that do not cover the eyes are required to wear DOT approved eye protection.

2.3. Other Attire

Each driver is required to wear closed-toe shoes. Gloves are strongly recommended.

It is recommended that each individual on the track (driver, pit crew, marshals) wear abrasion-resistant gloves and full-body clothing including long pants and a long shirt. Bring your own safety gear for use in the pits, such as safety glasses, and wear them when you should. Be adults about this. It's not our fault that you are irresponsible.

2.4 Practice Laps

All Drivers are required to drive multiple practice laps of the course before they drive during a race. These laps may be made during qualifying, moxie round, or free practice, and are preferably made in the vehicle driven in the race. However, they may be made in any Hacky Racers-legal vehicle. Any driver with 0 practice laps IS NOT allowed to drive in any race. The pre-race formation lap does not count.

3. Team Rules

3.1. Team Structure

Teams may be made of one or more people. Hackerspaces or other organization may enter as many teams as they wish.

3.1.1. Drivers/Participants

Each team must consist of at least the same number of members as the number of cars the team will run, preferably at least one more.

3.1.2. Car Entries

Each team may submit any number of car entries to a race. Please remember to sign your vehicle up for any events you plan to attend, as it helps the race organisers plan the events.

3.2. Team Volunteer

Any team with more members than cars should be prepared to help run the races. This includes:

- Track setup
- Race-day operations
- Flag/course marshalling

All members who are not working on their vehicle will be expected to help with the running of the event between races when required.

3.3. Team Sponsorship

Team sponsorships are allowed, and the terms of individual sponsorships are at each team's discretion.

4. General Event Rules

4.1. Event Structure

The event structure for Hacky Racers will change between events, but will roughly be made up of the following sections.

4.1.1. Qualifying Round

If the number of entries to an event exceeds 24, the race organizers may modify or add to these qualifying rules as they see fit in order to reduce the number of race entries to 24.

Qualifying consists of two laps of the track plus a brake test.

Cars that have yet to qualify will line up single-file in pit row.

Race organizers will call on cars one at a time to perform their qualifying laps and brake test.

4.1.1.1. Hot Lap

To start qualifying, you will take your car on a warm-up lap of the track.

This warm-up lap allows the organizers to verify that your car's transponder is working.

Once you cross the Start/Finish line at the end of the warm-up lap, your car's qualifying lap has begun.

Provided your car passes the brake test, its qualifying time is the time of its hot lap.

If you are not satisfied with your car's qualifying time, you may line up at the end of pit row and attempt to re-qualify if there is time.

4.1.1.2. Brake Test

At the end of the hot lap, your car will have to come to a complete stop within 6m of when its transponder crossed the start/finish line.

Deliberately skidding, swerving, or spinning out is not an acceptable method of braking for the brake test.

Impacting the barriers is not an acceptable method of braking for the brake test (or ever).

If you fail the brake test, you may line up at the end of pit row and attempt to re-qualify if there is time.

Cars that do not pass the brake test are not allowed to race.

4.1.3. Sprint Races

The event will then be made up of a series of races approximate duration of 10 minutes. The race winner is the one who does the most laps in that time. Cars will start this race in their qualifying order.

The race ends when all cars cross the Start/Finish line after the first car crosses the Start/Finish line after the 10 minute mark.

4.1.4. Battery Charging

As described in 1.8, builders must be familiar with the safe handling procedures for their batteries. For lithium Polymer, this means batteries mustn't be allowed to over discharge, charging must be in a 'Lipo safe' bag/box with an auto cutoff charger, and charging must be supervised at all times. No unattended charging, as it's a serious fire risk.

5. Race Rules

5.1. On-Track Safety

5.1.1. Flags

During the course of the race weekend, several flags of varying colors will be displayed. Some will be accompanied by audible horn sounds as well. Know them. Obey them.

5.1.1.1. Green

The green flag indicates that it is time to race. You will see the green flag at the start of the race, and you may see it once a yellow or red flag condition is cleared

5.1.1.2. Yellow

This flag indicates a local or full-track caution condition.

A full-track caution will be accompanied by the sounding of the horn, as indicated below.

While the course is under a full-track caution, passing is not allowed and drivers should remain in their current order unless instructed otherwise by a course worker

At all corners displaying a yellow flag for a local caution, passing is not allowed and drivers should remain in their current order until past the local caution area, unless instructed otherwise by a course worker. You may pass cars that have broken down or embedded themselves in the wall.

5.1.1.3. Red

This flag indicates a temporary pause to the racing due to something rendering part of the track temporarily impassable.

While the course is under a red flag, slow down and prepare to stop. Passing is not allowed and drivers should remain in their current order unless instructed otherwise by a course worker

5.1.1.4. Black

If you see The Grim waving this flag at you, make your way to the penalty box immediately. The Grim has something devious in mind to punish you for an infraction The Grim has noticed. Or you may be on fire. Don't worry, you'll probably know which it is.

5.1.1.5. White

This flag signifies that the last lap of the race has started.

This flag means that if your car is on fire and rapidly losing power, the end to its suffering is near, and you should push it as hard as it can go in the last remaining seconds of the race

This flag means that now is the time to attempt any heroic and inadvisable overtakes for finishing position.

This flag means your brakes don't exist for the next 60 seconds and the only acceptable throttle position is MOAR POWER!

5.1.1.6. Checkered

The race is over. Finish your lap, then head back to the pits, or don't. Watch out for spectators, people driving slowly, people doing donuts, driving the course in the wrong direction, etc.

5.1.2. Horn

The horn has two purposes in a race. Its primary purpose is to sound the beginning and end of a full-course caution. One short blast indicates that the course is under a full-course caution, and you will see every flag station waving the yellow flags described above. There will be no full-throttle racing, there will be no passing. Two short blasts indicate that the full-course caution is been lifted and you can go back to racing as normal.

5.2. Pit Lane Safety

Cars and participants should not block the pit lane at any time during the weekend

Reversing in pit row is not allowed during races

Driving the wrong way in pit row is not allowed during races

Cars should be stored with their kill switches off when not being raced or when unoccupied

NOTE: A brisk walking pace (5mph) should be maintained while driving in pit lane.

WARNING: Humans shall not stand, loiter, or otherwise occupy the pit lane during practice/qualifying/race sessions. Please keep aware of vehicles around you. Stand inside your pit stalls unless you are servicing or retrieving your vehicle, or your team will face penalties. If there are people loitering outside of your stall not part of your team, you will be penalized as well. Police your areas. You have been warned.

5.3. Rules Infractions and Penalties

5.3.1. The Grim Reaper

One person, designated by the Sanctioning Body, will don black robes and carry a large black flag any time cars are on the track. Throughout each and every race over the course of the season, the Grim Reaper has supreme, unquestionable reign over the track. The Grim Reaper's job is to pick out violators. If the Grim Reaper sees you commit a misdeed, your car will be impounded in the penalty box and the Grim Reaper will determine your punishment. The Grim Reaper's word is law. There is no arguing with the Grim Reaper. There's no reasoning with the Grim Reaper. The Grim Reaper was born of these rules and you shall worship the Grim Reaper.

5.3.2. Why am I Upside Down?

It's simple: if you flip your car and roll out of it during qualifying, race or any other point when other cars are on the track, you will get a penalty. The Grim will determine the weight of this crime, varying from a qualifying penalty, a stupidly amusing penalty, or - if you are somehow a danger to everyone in a non-hilarious way - we'll even consider making you fix it or park it for the weekend. So test your car, make sure you know the limit. There's no reason for you to be ejected on the track for incompetence. Do that ahead of time in random parking lots.

5.3.3. The "I Ain't Even Mad" Clause

We don't like people who half-ass things. If you are going to break one of our rules, we encourage you to go full ass, above and beyond the call of duty. We don't want cheap and sneaky exploits. We want clever hacks that will make great stories. If you feel like taking things too seriously, we want you to build something so blissfully impressive, so Adrian Neweyesque clever, or downright SpeedyCop crazy that your rule infraction gets an "I'm not even mad, actually I'm impressed" reaction from our judges. This may (or may not) exempt you from penalties.

5.3.4. The "Spirit of Power Racing" Clause

We're just a show. We're here to have fun. Rules will get bent, cars will break, so just relax and enjoy yourself. If you're reading line by line and looking for a 1/10th of a second lap time improvement, you're going to have a bad time. Aside from safety, not much else really matters. You don't race to win – you race 'til you break. Don't get too wrapped up in or obsessed with podiums or lap time records. Share tools. Be friends with rival teams. Have rivalries just because it's hilarious. Make friends. And most importantly, be excellent to one another.

5.4. Race Awards

5.4.1. Medals

5.4.1.1. Gold 'Yes'

You are the Race Winner. You get a big ol' Yes from us! You also get a hi-five.

5.4.1.2. Silver 'OK'

You are the first loser, but that's ok. You're better than most so you get a low-five.

5.4.1.3. Bronze 'No'

What, you get an award too? Geez, I guess so, but you get a big "no" from us. Also your low-five is down real low, and thus we will pull our hand away in a metaphorical nod to your performance: too slow.

5.4.2. Race Awards

5.4.2.1. The "Crash and Burn" Award

Congratulations! You made it to the event! Unfortunately you've spent more laps on the tyre wall than actually on the track. You also might be Australian and have spent most of your time upside down. Luckily, there's an award for that.

5.4.2.2. The "Epic Fix" Award

You did what to get this running again? Holy crap. We usually would make fun of somebody trying this hard, but we can't believe how many times you had to fix this heap. You did it though, and the car is limping around the track, barely moving but dammit, you're going to finish. You scrounged parts from random strangers. You broke your transmission three times and still managed to get back on the track. Literally nothing stopped your team. You didn't win, you didn't even look good while losing, but you managed to pull through in the end. Here's to you, crazy person.

5.4.2.3. The "Best In Show" Award

This is a prized treasure. You've built something so incredible we have to pause and collect our breaths. You've built a car that actually looks brilliant. It looks or drives so nicely that we actually felt bad when some team plowed it into the wall on the way to winning another Crash & Burn. If you intend to win this award be sure to take a lot of pictures before race day, because she ain't going to be pretty after we're done. This award is also for vehicles who fall into the "Technically legal" category. We know you bent a rule to the razor edge, and we want to encourage that behavior (but it will probably be banned at the next race/end of season). Thus, we will award you for the brazen insanity for pursuing it in the first place.

5.4.2.4. The Weekend Overall Winner Trophy

The car with the most number of wins over the weekend will be the overall winner, and probably get some kind of trophy.

6. Season Structure Rules

6.1. Points

6.1.1. Race Points

Race points are earned on a per-race basis by each vehicle's finishing position.

6.2.2. Moxie Points

Moxie is that little extra spice that levels the playing field. Not only can you win race points, but you can also entice and rile up the crowd to win points from them. It will be your team's job to find ways to garner audience attention and keep it over your competitors. This is the ultimate pursuit of the weird. Giant boom-box cars, Lucha masked racers, pre-race dance party are all par for the course. Consider this the social engineering section of your exam. Underdevelop your car against your rival hackerspace? Easy! Gain those points back by dressing up as a chicken. Your odds to win are good if your goods are odd. Consider it Halloween in July, and you have to get more candy bars than that kid next door.

6.2.2.1. Counting Moxie Points

An Arduino-controlled button board, the Moxie Board, tallies the votes of members of the public during races. The crowd is instructed to reward your spastic and odd behavior by pressing the button by your team's label. Next to each button is a 6x1.75 inch piece of space that is reserved for your team name and number. You are in charge of making a plaque that occupies this space and identifies who you are to the crowd. You can make it as fancy as you'd like, it can be lit up (you'll have to power it on your own), reflective, whatever, as long as it has the name of your team and your car number. I won't begin to lecture you on how many people royally screw this bit up. Do not do a last minute job on this one because it is the first thing the crowd sees when they are about to vote for you.

There's nothing like setting your car on fire to the applause of an audience only to realize that you used duct tape and silver sharpie to identify yourself on the board and now no one knows who you are. This board responds to one button press with a one second delay. This is so you don't plant yourself or your teammates out there by the board and just sit on the button all day. It should be noted that this is considered a really lazy and not-creative way to cheat, and thus lame. Don't be a lame team.

6.2.2.2. Suggestions to increase your Moxie Points

Are you a new team? How about an old team looking for some more points? Come here. Closer. Let me tell ya something. It'll be our little secret. You can get up to 150 bonus points if you make one of the cars below. Yeah. Seriously. I'm not messing around. Just try it. NOTE: these points will be awarded on a sliding scale of effort, as per the discretion of the judges. The more time you spend on making these look good, the more points you get. If you duct tape a bunch of cardboard boxes and scream "THAT'LL DO," we will reward you fewer points. Without further ado, here are the cars that could earn you up to 150 bonus points:

2016 Hit List

- Any Non-DeLorean car from Back To The Future
- Jim's dad's old car: 1977 Cadillac Eldorado (should be large enough for its own zip code)
- The Scooby Doo Mystery Machine (Please read this article before considering) (also costumes required)
- James Bond's Aston Martin DB5
- The A-Team Van (costumes are required, but please, be tasteful about it)
- Speed Racer's Mach 5. Cartoon or film are allowed.
- Bruce Willis floating Taxi Cab from The Fifth Element. (The more realistic that floating bit is, the better.)
- The bus from SPEED. Bus has to have a passenger. And a watch.
- Any Formula 1 car. Special bonus for the 1976 Tyrrel P34 Six Wheeler, Lotus 49 or the Brabham BT46 Fan Car (fan must be operational, does not need to provide actual downforce)
- Car built entirely out of LEGOs or made to look like it was actually built out of LEGOs

- Strange non-car cars. Duck car. IKEA table car. Purse First Purse Car (Jim has a RuPaul's Drag Race obsession, deal with it).
- Magic School Bus (Ms. Frizzle Cosplay is essential to the piece)
- 2016 Ford GT LeMans cars.
- Oscar Mayer Weinermobile (pun name bonus: 20 points)
- Initial D AE86 Driftcar
- F-14 Tomcat from Top Gun (Shirtless Volleyball scene strictly optional)
- Winnebago Urban Assault Vehicle from Stripes
- Lone Starr's Eagle 5 Winnebago from Spaceballs
- The Modded Jaguar XKE Hearse from Harold and Maude (Hipster mega-bonus for getting this reference) (bonus points if it only blasts Cat Stevens' "Trouble")
- Ford Crown Vic from Men In Black (with red button)
- Chitty Chitty Bang Bang
- Space Shuttle (keep it tasteful)
- More Dragons. Mythical beasts Any kind you can think.

Hit List Hall of Fame (Previous examples, so stop suggesting them)

- Back To The Future DeLorean (we already had one and it might be impossible to beat)
- Star Wars INCOM X-Wing Starfighter: Luke and R2D2 also needed (I'd love to see an A-Wing though)
- Every car from Jurassic Park (It's starting to get old now)
- TIE Fighter (we will accept TIE Interceptor)
- Ecto-1 (still haven't seen the new film version yet)

If you don't have the necessary level of love or happiness in your life to create such masterpieces, rest assured because we have points for you lazy and crazy fools. A carbon-based swath of 3 judges including yours truly will score your car on a completely arbitrary scale (see Chicago-style voting) to determine your entrants quality and, by proxy, your overall self worth. One of those judges might be somebody remotely famous but we reserve the right to totally screw that part up. We will give a maximum of 100 points for tip top efforts. It'll have to be good though. Perhaps you want to build crazy parts of your car from under qualified materials, or

perhaps you want a working 8 speed transmission. Maybe you wish to drive a rolling human ear that shoots earwax at the crowd. Your creativity will be rewarded, just be aware that sweat equity far outweighs making up some crap on the spot, unless it's really really clever crap.

Also if you are still reading I'll give 400 points to anybody who develops an open source 3 phase motor controller. Schematics need to be an open source format. Code has to be commented out and posted on github. Gotta spec out the cost of the parts, release the instructions online and have those ready at the moment of points rewarding. The design has to be proven and race winning. Yep. Totally for real here.

6.3. Season Awards

Three awards are given out each season.

If a car wins more than one of these awards, that car's team will choose one award to keep, and the remaining award(s) will be given to the next-most-qualified team.

Each award belongs to a car for one year.

Each award must be modified by the winning car's team before the next season's giving of the award.

6.3.1. The Tesla Cup

The Tesla Cup is awarded to the car with the highest total moxie points plus race points in a season.

6.3.2. The Moxie Cup

The Moxie Cup is awarded to the car with the highest total moxie points in a season.

6.3.3. The Chapman Trophy

The Chapman Trophy is awarded to the car with the highest total race points in a season.

6.4. 2016 Misc. Notes

6.4.2. NOOB (New Orientation for Overtaking Basics) Team Orientation

The guidelines for this orientation involves proper driving etiquette and the basic racing guidelines that turns your new team into one that people will actually like and respect, because you didn't cut anyone faster than you off.
